3. DATE-TIME GROUP Local _____ GMT 4/0008Z		4. TYPE OF OBSERVATION <input type="checkbox"/> Ground-Visual <input type="checkbox"/> Ground-Radar <input checked="" type="checkbox"/> Air-Visual <input checked="" type="checkbox"/> Air-Intercept Radar			
5. PHOTOS <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		6. SOURCE Military			
7. LENGTH OF OBSERVATION 5 secs		8. NUMBER OF OBJECTS one		9. COURSE NE	
10. BRIEF SUMMARY OF SIGHTING A bright orange light observed streaking across the sky. An extremely bright blue flash occurred which reflected in the cockpit of the A/C. Simultaneously very high acceleration was noted. A/C navigator observed a jamming on his radar set approx 10 mins prior to sighting. After approx 1 hr on course, a thin outline of what appeared to be vapor trail or high cirrus was sighted on what was thought to be the relative position of the obj when originally sighted.				11. COMMENTS Possible this could be satellite portion of Sputnik I, which is supposed to have 'died' on or about 4 Jan 58. However the duration of the sighting is only 5 secs. No flaking or break-up noted, as is normally expected for a satellite decay. It is more probable that this was a meteor observation.	

Greg

4E4

This could possibly be the
satellite portion of Spectra I
which is supposed to have
"died" on or about 4 Jan 58.

There is no information
available to my knowledge
as to its location during
its final phases since the last
orbital position was
plotted on 20 Nov 1957.

Because of garbled section
of report it is impossible
to get much out of this
UFO sighting except the
date, especially as those
portions of the report which
might have an applicability
to satellites.

Mitch
